

TERSANO BULLETIN ON THE CORONAVIRUS

Thursday, January 30, 2020

We are receiving numerous inquiries as to whether or not Tersano SAO™ is able to kill the coronavirus.

The scientific name for the coronavirus is “coronaviridae.” Thankfully, the coronaviridae virus is in the group of viruses that are easiest to kill. The coronaviridae is classified as an “enveloped” virus. According to the United States EPA, “Enveloped viruses are the least resistant...once the envelope is damaged, the integrity of the virus is compromised, thereby neutralizing its infectivity.”

In plain language, this means the coronavirus is a weak virus that is easy to kill with standard sanitizing processes.

Please be assured that Tersano is moving very fast to test and confirm this. We are working with laboratories right now and will update you immediately as we progress. I should have an update on test results very soon.

In the meantime, if you have questions or concerns, please do not hesitate to reach out.

Kind regards,

Steve Hengsperger
